

TELCRA[®]

THE BEST INSULATING SOLUTION

FEATURES

Telcra[®] is an innovative material developed by Venair TechLab which stands out by its **excellent insulating properties**, either hot or cold and anticondensation.

This material possesses low thermal conductivity and low density, for this reason it can achieve excellent insulation with a low thickness. Telcra[®] forms chemical bond with silicone materials.

This is a unique material in the market that can be applied to any of the products of Venair's catalogue thanks to its perfect adhesion to the silicone.

Telcra[®] is suitable for both hot/cold insulation and anti-condensation purposes on cold surfaces.

APPEARANCE

- Telcra[®] for high temperatures: the hose is covered with a silicone layer in the outside
- Telcra[®] for low temperatures: the outer layer is made from Telcra[®] material to avoid condensation

TECHNICAL INFORMATION

| | |
|---------------------------------------|------------------------------------|
| Temperature range | -60 to 220 °C |
| Color | White (other colors under request) |
| Density (kg/m³) | 500 |
| Thickness | Customizable |
| Thermal conductivity [W/(k·m)] | 0.12 |
